

SAMYAK JAIN

TEXAS | (979)575-9626 | samyak.tamu@gmail.com | www.linkedin.com/in/samyak-delhi

SUMMARY OF QUALIFICATIONS

- 3+ years of process and quality engineering experience in high-volume manufacturing, raising process capability (Cpk 0.46 to 1.49) and recovering First-Pass Yield from 80% to 99.4% while eliminating \$150K/year in scrap.
- ISO 9001 Internal Auditor and IATF 16949 Internal Auditor, with hands-on experience implementing quality management system controls, manufacturing control plans, and internal audit schedules on the plant floor.
- Six Sigma Green Belt with experience in SPC, DMAIC, and root-cause analysis to reduce defects, stabilize cycle times, and hold production processes in control.

EDUCATION

- **Texas A&M University, College Station, TX** (MS in Industrial Engineering) **05/2026**
- **Narsee Monjee Institute of Management Studies, Maharashtra, India** (MBA) **02/2024**
- **Guru Gobind Singh Indraprastha University, Delhi, India** (BS in Mechanical and Automation Engineering) **05/2021**

WORK EXPERIENCE

Texas A&M University, Chemistry Department, College Station, TX: Lab Technician **01/2025-05/2026**

- Supported installation and maintenance of chemical fume hoods, coordinating with vendors and verifying airflow and safety system performance after commissioning.
- Operated and maintained glovebox systems in ISO-classified controlled environments, enforcing contamination-control protocols and inert atmosphere integrity in line with lab safety standards.
- Led a materials safety upgrade replacing mercury bubblers with sand-based alternatives across lab setups, evaluating technical requirements, sourcing compliant replacements, and completing the transition with zero disruption to ongoing operations.
- Performed routine inspections, preventive maintenance, and documentation for controlled-environment equipment to ensure ongoing compliance with departmental safety and operational procedures.

Utility Power Systems, Delhi, India: Senior Quality / Process Engineer **01/2023 – 07/2024**

- Stabilized pipe-bending and forming operations using SPC and DMAIC, raising process capability (Cpk 0.46 to 1.49) and recovering First-Pass Yield from 80% to 99.4%, eliminating \$150K/year in scrap.
- Helped implement ISO 9001 operational, performance-evaluation, and improvement controls (Clauses 8-10) across production processes during a facility migration, working alongside operations and quality teams on the plant floor to bring processes into conformance and keep them compliant.
- Built manufacturing control plans and the internal audit schedule as part of the ISO 9001 implementation, defining in-process inspection points, characteristics, reaction plans, and audit frequency and coverage so production stayed in conformance through and after the facility migration.
- Resolved customer field failures and returned parts across several escalations, delivering the required rework at the customer site, running root-cause analysis back to the originating process, and implementing corrective measures such as poka-yoke error-proofing and Kaizen improvements so the failure mode could not recur.
- Wrote SOPs and standard work instructions for fabrication processes including welding, blasting, galvanization, and powder coating under ISO 9001 Clause 8.5 (control of production and service provision), stabilizing cycle times and supporting consistent downstream quality.
- Redesigned workstations applying OSHA-aligned practices covering machine guarding and point-of-operation safety, ergonomic assessment, and PPE/hazard communication, as part of a motion-analysis effort on a multi-step line, reducing end-to-end lead time by about 20%.
- Qualified PPAP submissions against customer requirements for critical fabricated parts, and coordinated ECN/process-change communication with customers to keep specs and delivery aligned.

Uno Minda Limited, Haryana, India: Senior Engineer **01/2022 – 01/2023**

- Reviewed 25+ assembly lines for conformance to IATF 16949 requirements ahead of certification, working with production and quality to close gaps in documentation and process control.
- Supported development and launch of high-volume motorcycle switch assemblies for OEMs including Yamaha, Suzuki, and Piaggio, applying APQP phases and PPAP part submissions to coordinate across design, manufacturing, quality, logistics, and suppliers.
- Sat in on structured risk-assessment sessions with maintenance and quality to run DFMEA and PFMEA across 8 product designs, catching 20+ potential failure modes and cutting design-stage issues by about 30% before tooling release.
- Designed a pilot production line to meet internal manufacturing standards while satisfying IATF 16949 process requirements, translating engineering design specs into repeatable workstation setups and cutting operator cycle time by about 30%.

- Executed 37 Kaizen and Lean initiatives with production and maintenance teams, improving uptime and method consistency and contributing to about 4-5% cost reduction in targeted assemblies.
- Managed engineering changes and SAP configuration for 25+ product lines, keeping BOMs, routings, and production documents aligned with current design intent and production requirements.

Boiler Components Mfg. Co., Delhi, India: Intern

03/2020 – 08/2020

- Handled 2D drafting of new consignments on AutoCAD and oversaw the execution of fabrication, as per the drawing.
- Gained foundational knowledge in optimization and operations management techniques, such as Lean Manufacturing and Just-In-Time (JIT), which laid the groundwork for my early career development

PROJECTS

- [Advanced Quality Control Project \(2025\)](#): Multivariate SPC using PCA and control charts on a high-dimensional manufacturing dataset.
- [Machine Learning for Process Analytics \(2025-26\)](#): Random Forest and XGBoost models on operational data for data-driven engineering decisions.
- [Stonewall Project – KPIs, IDEF0 & VSM \(2025\)](#): KPI framework and value stream maps feeding Balanced Scorecard for leadership.

TECHNICAL SKILLS

- **Quality & problem solving:** APQP, PPAP, manufacturing control plans, internal audit scheduling, DFMEA, PFMEA, DMAIC, 8D, SPC, gauge R&R (MSA), root-cause analysis, process capability (Cpk), FPY improvement, defect reduction, GD&T.
- **Standards & compliance:** ISO 9001 Internal Auditor, IATF 16949 Internal Auditor, OSHA-aligned machine guarding, ergonomics, and PPE/hazard communication.
- **Process engineering:** Cycle-time and takt improvement, line balancing, time studies, standard work and SOP development, workstation design, poka-yoke error-proofing, Kaizen, Lean, in-process inspection and test coverage planning.
- **Simulation and analytics:** Power BI, Minitab, Excel (advanced), Python, SQL, Tableau, FlexSim, JaamSim.
- **Systems & design tools:** SAP, AutoCAD, SolidWorks, Moldflow.
- Six Sigma Green Belt, PMP (in progress).
