

SAMYAK JAIN

TEXAS | (979)575-9626 | samyak.tamu@gmail.com | www.linkedin.com/in/samyak-delhi

SUMMARY OF QUALIFICATIONS

- Six Sigma Green Belt with experience in Python, Power BI, Minitab, and simulation tools for data-driven process optimization.”
- 3+ years in process engineering, lean manufacturing and continuous improvement for high-volume automotive manufacturing, including layouts, workflows, and tooling optimization.
- 3+ years of work experience in production line layouts, capacity modeling, and workstation design in manufacturing environments.
- Actively working toward PMP certification (project management coursework and exam preparation in progress).

EDUCATION

- **Texas A&M University, College Station, TX** (MS in Industrial Engineering) **05/2026**
- **Narsee Monjee Institute of Management Studies, Maharashtra, India** (MBA) **02/2024**
- **Guru Gobind Singh Indraprastha University, Delhi, India** (BS in Mechanical and Automation Engineering) **05/2021**

WORK EXPERIENCE

Texas A&M University, Chemistry Department, College Station, TX: Lab Technician **01/2025-05/2026**

- Supported installation and maintenance of chemical fume hoods, coordinating with vendors and verifying airflow and safety system performance after commissioning.
- Operated and maintained glovebox systems in ISO-classified controlled environments, enforcing contamination-control protocols and inert atmosphere integrity in line with lab safety standards.
- Led a materials safety upgrade replacing mercury bubblers with sand-based alternatives across lab setups, evaluating technical requirements, sourcing compliant replacements, and completing the transition with zero disruption to ongoing operations.
- Performed routine inspections, preventive maintenance, and documentation for controlled-environment equipment to ensure ongoing compliance with departmental safety and operational procedures.

Utility Power Systems, Delhi, India: Senior Industrial Engineer- Process Improvement **01/2023 – 07/2024**

- Owned manufacturing readiness for transferred product lines during a facility migration, coordinating with design, operations, quality, and suppliers to support ramp-up and stable launch execution.
- Led process improvement initiatives and motion analysis on a multi-step line and redesigned workstations, reducing end-to-end lead time by about 20%.
- Planned plant and line layouts in AutoCAD and built a JaamSim discrete-event simulation model to evaluate layout, buffer, and staffing scenarios for bottleneck and capacity analysis.
- Designed inbound and internal material-flow concepts and developed a basic PFEP, reducing raw material and WIP inventory from 60 to 15 days and freeing about \$480K in working capital.
- Stabilized pipe-bending and forming operations using SPC and DMAIC, raising process capability (Cpk 0.46 to 1.49) and recovering First-Pass Yield from 80% to 99.4%, eliminating \$150K/year in scrap
- Built Power BI dashboards for FPY, utilization/OEE, inventory, defect categories, and on-time delivery to support KPI tracking and continuous improvement.

Uno Minda Limited, Haryana, India: Senior Engineer **01/2022 – 01/2023**

- Supported development and launch of high-volume motorcycle switch assemblies for OEMs including Yamaha, Suzuki, and Piaggio, coordinating across design, manufacturing, quality, logistics, and suppliers.
- Led pilot assembly-line and workstation layout improvements, reducing wasted motion, improving ergonomics, and cutting operator cycle time by about 30%.
- Managed engineering changes and SAP configuration for around 25 product lines, keeping BOMs, routings, and production documents aligned with current design intent and production requirements.
- Designed and 3D-printed 100+ prototype fixtures for testing motorcycle switch assemblies on a universal testing machine (UTM), cutting fixture lead time from weeks to days and reducing the need for rework on production tooling.
- Used Moldflow, DFM, and DFMEA on injection-molded components to identify flow, cooling, and warpage risks before tooling release, improving manufacturability and reducing design-stage issues.
- Executed 37 Kaizen and Lean initiatives with production and maintenance teams, improving uptime, method consistency, and cost performance while contributing to about 4–5% cost reduction in targeted assemblies.

Boiler Components Mfg. Co., Delhi, India: Intern **03/2020 – 08/2020**

- Handled 2D drafting of new consignments on AutoCAD and oversaw the execution of fabrication, as per the drawing.
- Gained foundational knowledge in optimization and operations management techniques, such as Lean Manufacturing and Just-In-Time (JIT), which laid the groundwork for my early career development

PROJECTS

- **Advanced Quality Control Project (2025)**: Multivariate SPC using PCA and control charts on a high-dimensional manufacturing dataset.
- **Machine Learning for Process Analytics (2025-26)**: Random Forest and XGBoost models on operational data for data-driven engineering decisions.
- **Stonewall Project – KPIs, IDEF0 & VSM (2025)**: KPI framework and value stream maps feeding Balanced Scorecard for leadership.

TECHNICAL SKILLS

- **Industrial engineering**: Production line layouts, plant layouts, capacity modeling, time studies, work measurement, line balancing, workstation design, takt/cycle-time improvement, PFEP, material-flow planning.
- **Simulation and analytics**: JaamSim, FlexSim, Power BI, Excel (advanced), Python, SQL, Minitab, Tableau.
- **Continuous improvement**: Six Sigma Green Belt, DMAIC, SPC, PDCA, root-cause analysis, Lean Engineering, FPY improvement.
- **Systems and design tools**: AutoCAD, SolidWorks (basic), SAP, Moldflow
